Abstracts

Shape memory materials are a widely-investigated class of smart materials capable of changing from one predetermined shape to another in response to a stimulus. The demand for structures capable of autonomously adapting their shape according to specific varying conditions has led to the development of shape memory materials such as Shape Memory Alloys (SMA) and Shape Memory Polymers (SMP).

Shape Memory Alloys (SMA) are able to recover their initial shape after a deformation has occurred, when subjected to particular thermal conditions. They possess superelastic behavior, which allows large deformations with limited or no residual strain, and a high power-to-weight ratio. Other properties include biocompatibility, high corrosion resistance, high wear resistance and high anti-fatigue.

SMA are used in couplings, actuators and smart materials and are particularly suitable for adaptive structures in electrical components, construction, robotics, aerospace and automotive industries. Systems based on SMA actuators are already in use in valves and drives, where they offer lightweight, solid state options to habitual actuators such as hydraulic, pneumatic and motor based systems.

SMA are used in many other applications such as medical, controllers for hot water valves in showers, petroleum industry, vibration dampers, ball bearings, sensors, miniature grippers, micro valves, pumps, landing gears, eye glass frames, material for helicopter blades, sprinklers in fire alarm systems, packaging devices for electronic materials, dental materials, etc. The medical market for NiTiNol is a multi-million dollar market.

Shape memory polymers (SMPs) are a programmable (multi)stimuli-responsive

polymers that change shape and stiffness through a thermal transition such as a glass transition. SMPs can recover their initial shape upon direct or Joule heating, radiation and laser heating, microwaves, pressure, moisture, solvent or solvent vapours and change in the pH values. Shape-memory polymers differ from SMAs by their glass transition or melting transition from a hard to a soft phase which is responsible for the shape-memory effect. In shape-memory alloys martensitic/austenitic transitions are responsible for the shape-memory effect. There are numerous advantages that make SMPs more attractive than shape memory alloys; however there are also significant disadvantages.

The Global Market for Shape Memory Materials includes:

Applications and markets for shape memory alloys and shape memory polymers.

Analysis of shape memory materials by types and properties.

Patent analysis.

Assessment of economic prospects of the market for shape memory materials.

Market trends impacting the market for shape memory materials.

Main applications and markets for shape memory materials. Markets covered include biomedical, actuators across multiple markets, electronics, consumer goods, construction, tires, textiles, aerospace, soft robotics, automotive etc.

Shape memory market demand forecast (revenues), by type, market and region 2015-2030.

Shape memory materials producer profiles. Companies profiled include Awaji Materia Co., Ltd., Cambridge Mechatronics Limited, Dynalloy, Inc., Furukawa Electric Group, Maruho Hatsujo Kogyo Co., Ltd., Nippon, re-fer AG, SAES Group, VenoStent etc.

Contents

1 RESEARCH SCOPE AND METHODOLOGY

- 1.1 Report scope
- 1.2 Research methodology

2 EXECUTIVE SUMMARY.

- 2.1 MARKET DRIVERS
- 2.2 APPLICATIONS
- 2.3 MARKET CHALLENGES

3 TYPES OF SHAPE MEMORY MATERIALS

- 3.1 SHAPE MEMORY ALLOYS (SMA)
 - 3.1.1 Shape memory effect.
 - 3.1.2 Superelasticity
 - 3.1.3 Nickel-Titanium (Ni-Ti) alloys
 - 3.1.3.1 Properties.
 - 3.1.3.2 Commercialization
 - 3.1.4 Copper-based SMAs
 - 3.1.5 Iron-based SMAs.
 - 3.1.6 Hardened high temperature shape memory alloys (HTSMAs)
 - 3.1.7 Titanium-Tantalum (Ti-Ta)-based alloys.
 - 3.1.8 SMA actuators
- 3.2 SHAPE MEMORY POLYMERS (SMP)
 - 3.2.1 Shape memory polyurethane (SMPU).
 - 3.2.2 Shape memory hydrogels (SMH)
 - 3.2.3 Carbon nanotubes SMPs.
- 3.3 SHAPE MEMORY CERAMICS (SMC).

4 SHAPE MEMORY PATENTING

5 SHAPE MEMORY MATERIALS MARKETS AND APPLICATIONS.

- 5.1 MEDICAL, HEALTHCARE AND DENTAL
 - 5.1.1 Stents
 - 5.1.2 Orthodontic archwires

- 5.1.3 Ablation devices
- 5.1.4 Orthopaedic staples
- 5.1.5 Prosthetics.
- 5.1.6 Sutures
- 5.1.7 Tissue engineering
- 5.1.8 Insulin Pump.
- 5.1.9 Rehabilitation
- 5.2 ELECTRONICS
 - 5.2.1 Flexible electronics.
 - 5.2.2 Displays
 - 5.2.3 Smartphone camera actuators
- 5.3 CONSUMER GOODS
 - 5.3.1 Eyeglass frames
 - 5.3.2 Home appliances.
- 5.4 CONSTRUCTION
 - 5.4.1 Vibration damping
 - 5.4.2 Memory steel.
- 5.5 AVIATION AND AEROSPACE
 - 5.5.1 SMA actuators
 - 5.5.2 Shape memory tires
 - 5.5.3 SMA composites
- 5.6 TEXTILES
 - 5.6.1 Medical textiles.
 - 5.6.2 Breathable fabrics
 - 5.6.3 Energy-storage textiles for wearables
- 5.7 AUTOMOTIVE
 - 5.7.1 SMA actuators
 - 5.7.2 SMA valves
 - 5.7.3 Autonomous vehicles.
- 5.8 ROBOTICS
- 5.9 ANTI-COUNTERFEITING AND SECURITY
- 5.10 OTHER MARKETS

6 GLOBAL REVENUES AND REGIONAL MARKETS

- 6.1 Global market to 2030, total revenues (USD)
- 6.2 Global market to 2030, by region

7 SHAPE MEMORY COMPANY PROFILES.. 51 (38 COMPANY PROFILES)
