

The Global Market for Sustainable Construction Materials 2024-2035

<https://marketpublishers.com/r/GAAAC49A1BBAEN.html>

Date: April 2024

Pages: 243

Price: US\$ 1,270.00 (Single User License)

ID: GAAAC49A1BBAEN

Abstracts

The construction industry is undergoing a green revolution, with sustainable and bio-based materials at the forefront of this transformative shift. 'The Global Market for Sustainable Construction Materials' is an in-depth market research report that explores the burgeoning world of eco-friendly building materials, offering invaluable insights into the latest trends, technologies, and opportunities within this rapidly evolving sector.

This report covers a wide range of sustainable construction materials, including bio-based solutions, sustainable concrete and cement alternatives, natural fiber composites, advanced insulation materials, and innovative technologies such as self-healing concrete and green steel. Each material is analyzed in terms of its properties, applications, and market potential, providing industry stakeholders with the information needed to make informed decisions.

The report includes a detailed examination of global revenues, segmented by material type and end-use market, presenting current and projected market sizes from 2020 to 2035. It also explores the applications of sustainable construction materials across various market segments, such as residential buildings, commercial and office spaces, and infrastructure projects.

In addition to market analysis, the report features an extensive company profiles section, showcasing the key players driving innovation and growth within the sustainable construction materials industry. From established multinationals to emerging start-ups, these profiles offer valuable insights into the competitive landscape, highlighting each company's products, technologies, and strategic initiatives. Companies profiled include Adaptavate Ltd, Aizawa Concrete, Bio Fab NZ, Brimstone, CarbonBuilt Inc, Concrete4Change, Croft, Gravithy, Greenore Cleantech LLC,

Hempitecture, Liatris, Prometheus Materials, Strong by Form, Terra CO2 Technologies and ZS2 Technologies.

Report contents include:

Comprehensive analysis of the sustainable construction materials market, including market size, growth projections, and key trends

In-depth exploration of various sustainable construction materials, such as bio-based solutions, green concrete, natural fiber composites, and advanced insulation materials

Detailed examination of innovative technologies, including self-healing concrete, carbon capture and utilization, and green steel production

Segmentation of the market by material type and end-use application, including residential, commercial, and infrastructure sectors

Extensive company profiles featuring key players driving innovation and growth within the industry

Identification of growth opportunities and strategic recommendations for stakeholders looking to capitalize on the expanding market for sustainable construction materials

Discussion of the regulatory landscape, sustainability certifications, and government initiatives promoting the adoption of eco-friendly building practices

Exploration of future trends and emerging technologies shaping the sustainable construction materials market

The Global Market for Sustainable Construction Materials 2024-2035 is an essential resource for architects, engineers, builders, manufacturers, suppliers, and investors seeking to understand and capitalize on the immense potential of eco-friendly building materials. By providing a comprehensive, data-driven analysis of this dynamic market, this report empowers stakeholders to make informed decisions, forge strategic partnerships, and contribute to a greener, more sustainable built environment.

Contents

1 RESEARCH METHODOLOGY

2 INTRODUCTION

2.1 Market overview

- 2.1.1 Benefits of Sustainable Construction
- 2.1.2 Global Trends and Drivers

2.2 Global revenues

- 2.2.1 By materials type
- 2.2.2 By market

3 TYPES OF SUSTAINABLE CONSTRUCTION MATERIALS

3.1 Established bio-based construction materials

3.2 Hemp-based Materials

- 3.2.1 Hemp Concrete (Hempcrete)
- 3.2.2 Hemp Fiberboard
- 3.2.3 Hemp Insulation

3.3 Mycelium-based Materials

- 3.3.1 Insulation
- 3.3.2 Structural Elements
- 3.3.3 Acoustic Panels
- 3.3.4 Decorative Elements

3.4 Sustainable Concrete and Cement Alternatives

- 3.4.1 Geopolymer Concrete
- 3.4.2 Recycled Aggregate Concrete
- 3.4.3 Lime-Based Materials
- 3.4.4 Self-healing concrete
 - 3.4.4.1 Bioconcrete
 - 3.4.4.2 Fiber concrete
- 3.4.5 Microalgae biocement
- 3.4.6 Carbon-negative concrete
- 3.4.7 Biomineral binders

3.5 Natural Fiber Composites

- 3.5.1 Types of Natural Fibers
- 3.5.2 Properties
- 3.5.3 Applications in Construction

- 3.6 Cellulose nanofibers
 - 3.6.1 Sandwich composites
 - 3.6.2 Cement additives
 - 3.6.3 Pump primers
 - 3.6.4 Insulation materials
 - 3.6.5 Coatings and paints
 - 3.6.6 3D printing materials
- 3.7 Sustainable Insulation Materials
 - 3.7.1 Types of sustainable insulation materials
 - 3.7.2 Aerogel Insulation
 - 3.7.2.1 Silica aerogels
 - 3.7.2.2 Aerogel-like foam materials
 - 3.7.2.3 Metal oxide aerogels
 - 3.7.2.4 Organic aerogels
 - 3.7.2.5 Biobased and sustainable aerogels (bio-aerogels)
 - 3.7.2.6 Carbon aerogels
 - 3.7.2.7 Additive manufacturing (3D printing)
 - 3.7.2.8 Hybrid aerogels
- 3.8 Carbon capture and utilization
 - 3.8.1 Overview
 - 3.8.2 Market structure
 - 3.8.3 CCUS technologies in the cement industry
 - 3.8.4 Products
 - 3.8.4.1 Carbonated aggregates
 - 3.8.4.2 Additives during mixing
 - 3.8.4.3 Carbonates from natural minerals
 - 3.8.4.4 Carbonates from waste
 - 3.8.5 Concrete curing
 - 3.8.6 Costs
 - 3.8.7 Challenges
- 3.9 Green steel
 - 3.9.1 Current Steelmaking processes
 - 3.9.2 Decarbonization target and policies
 - 3.9.2.1 EU Carbon Border Adjustment Mechanism (CBAM)
 - 3.9.3 Advances in clean production technologies
 - 3.9.4 Production technologies
 - 3.9.4.1 The role of hydrogen
 - 3.9.4.2 Comparative analysis
 - 3.9.4.3 Hydrogen Direct Reduced Iron (DRI)

- 3.9.4.4 Electrolysis
- 3.9.4.5 Carbon Capture, Utilization and Storage (CCUS)
- 3.9.4.6 Biochar replacing coke
- 3.9.4.7 Hydrogen Blast Furnace
- 3.9.4.8 Renewable energy powered processes
- 3.9.4.9 Flash ironmaking
- 3.9.4.10 Hydrogen Plasma Iron Ore Reduction
- 3.9.4.11 Ferrous Bioprocessing
- 3.9.4.12 Microwave Processing
- 3.9.4.13 Additive Manufacturing
- 3.9.4.14 Technology readiness level (TRL)
- 3.9.5 Properties

4 MARKETS AND APPLICATIONS

- 4.1 Residential Buildings
- 4.2 Commercial and Office Buildings
- 4.3 Infrastructure

5 COMPANY PROFILES 118 (136 COMPANY PROFILES)
