

# The Global Market for Titanium Dioxide Nanoparticles 2023-2033

<https://marketpublishers.com/r/G276D4A2A577EN.html>

Date: May 2023

Pages: 109

Price: US\$ 1,000.00 (Single User License)

ID: G276D4A2A577EN

## Abstracts

Titanium dioxide (TiO<sub>2</sub>) possesses a higher refractive index than diamond, does not absorb visible rays, and is highly chemically stable. Therefore, it is widely used in paints and cosmetics as a white pigment and ultra-violet (UV) absorbing agent. There are three types of crystal structures of titanium dioxide-anatase, rutile and brookite. Industrially used ones are anatase and rutile. Rutile is the most stable, and anatase converts to rutile at temperatures in excess of 700 °C.

Micronparticle titanium dioxide (TiO<sub>2</sub>) and nanoparticle Titanium Dioxide (TiO<sub>2</sub>-NPs) are markedly different materials. Micron particle size TiO<sub>2</sub> is mainly used as white pigment in the paint and cosmetic industry. TiO<sub>2</sub>-NPs possess a much greater surface area of a given mass or volume of nanoparticles compared to an equivalent mass or volume of conventional TiO<sub>2</sub> particles, resulting in enhanced catalytic activity and UV absorption at certain wavelengths.

TiO<sub>2</sub>-NPs exhibit UV shielding effects, and rutile is widely used in the cosmetics sector, especially in sunscreens. Anatase displays photocatalytic functions (more so than rutile) and offers self-cleaning capabilities under sunlight, air cleaning, water quality improvement and anti-microbial and anti-mould functions for application in numerous paints and coatings sectors. Nano-porous TiO<sub>2</sub> thin films have been widely used as the working electrodes in dye-sensitized solar cells (DSSCs). DSSCs consist of a sensitizing dye, a transparent conducting substrate (F-doped tin oxide), a nanometer sized TiO<sub>2</sub> film, iodide electrolyte, and a counter electrode (Pt or carbon).

Commercially available brands of TiO<sub>2</sub>-NPs vary in particle size, surface area, purity (e.g., due to doping, coating, or quality control), surface characteristics, crystalline form, chemical reactivity, and other properties. Photocatalytic paints and coatings (containing

photo-active titanium dioxide (TiO<sub>2</sub>) as a white pigment) have been widely used in building protection due to the self-cleaning activity of TiO<sub>2</sub>, which effectively remove inorganic and organic pollutants as well as dirt and stains. Photocatalytic coatings are largely composed of nanoparticles of ceramic oxides, with most based on titanium dioxide (TiO<sub>2</sub>). Other types contain mixtures of TiO<sub>2</sub> with silicon dioxide (SiO<sub>2</sub>) and/or zinc oxide (ZnO). Tungsten oxides have found application in indoor photocatalysts activated by visible light.

Report contents include:

Market drivers and trends.

Properties and synthesis methods.

Market segment analysis. Markets covered include Sunscreens and cosmetics (personal care products), Coatings, Biomedicine and healthcare, Ceramics and solar.

Global market structure.

Global regulations and safety.

Price and price drivers.

Market consumption of Titanium dioxide (TiO<sub>2</sub>) nanoparticles/powders, total, by market and by region.

Profiles of 58 companies.

## Contents

### **1 RESEARCH METHODOLOGY**

### **2 INTRODUCTION**

- 2.1 Aims and objectives of the study
- 2.2 Technology Readiness Level (TRL)
- 2.3 Market definition
  - 2.3.1 Properties of nanomaterials
- 2.4 Categorization

### **3 EXECUTIVE SUMMARY**

- 3.1 The global market for nanoparticles/powders
- 3.2 Titanium dioxide nanoparticles/powders market

### **4 MARKET DRIVERS**

- 4.1 New functionalities and improved properties
- 4.2 Mitigating the spread of disease
- 4.3 Need for more effective protection and improved asset sustainability
- 4.4 Photocatalytic coatings to inhibit microbial contamination
- 4.5 Sustainable coating systems and materials
- 4.6 Need to improve outdoor air quality
- 4.7 Need to improve indoor air quality
- 4.8 Building protection

### **5 PROPERTIES**

- 5.1 Micronparticle TiO<sub>2</sub> versus Nanoparticle TiO<sub>2</sub>
- 5.2 Photocatalytic
- 5.3 UV-filter
- 5.4 Glass coatings
- 5.5 Interior coatings

### **6 MARKET SEGMENT ANALYSIS**

- 6.1 Sunscreens and cosmetics (personal care products)

- 6.1.1 Applications
- 6.1.2 Market demand 2019-2033
- 6.2 Coatings
  - 6.2.1 Self-cleaning coatings glass
  - 6.2.2 Photocatalytic oxidation (PCO) indoor air filters
  - 6.2.3 Water treatment
  - 6.2.4 Medical facilities
  - 6.2.5 Antimicrobial coating indoor light activation
  - 6.2.6 Market demand 2019-2033
- 6.3 Building and construction
  - 6.3.1 Coatings and surfaces
  - 6.3.2 Self-sensing concrete
    - 6.3.2.1 Filler materials
    - 6.3.2.2 Applications

## **7 REGULATIONS AND SAFETY**

- 7.1 Regulations
  - 7.1.1 Europe
  - 7.1.2 North America
  - 7.1.3 Asia-Pacific
- 7.2 Toxicity and safety

## **8 TECHNOLOGY READINESS LEVEL (TRL) CHART**

## **9 GLOBAL MARKET DEMAND FOR TITANIUM DIOXIDE NANOPARTICLES/POWDERS**

- 9.1 Titanium dioxide nanoparticles/powders market share 2020
- 9.2 Demand in tons, 2010-2033
  - 9.2.1 Total global demand
  - 9.2.2 Demand by market 2019-2033
- 9.3 Consumption by region

## **10 COMPANY PROFILES**

- 10.1 TREATED NANO-TIO<sub>2</sub> NANOMATERIALS PRODUCERS 62 (14 company profiles)
- 10.2 TIO<sub>2</sub> NANOMATERIALS PRODUCERS 72 (13 company profiles)

10.3 OTHER COMPANIES 80 (31 company profiles)

## **11 REFERENCES**

## List Of Tables

### LIST OF TABLES

Table 1. Technology Readiness Level (TRL) Examples.

Table 2. Categorization of nanomaterials.

Table 3. The Global market for nanomaterials in 2022 in tons, market characteristics and growth prospects.

Table 4. Market overview for titanium dioxide nanoparticles -Selling grade particle diameter, usage, advantages, average price/ton, high volume applications, low volume applications and novel applications.

Table 5. Main markets and applications for TiO<sub>2</sub> nanoparticles/nanopowders.

Table 6. Market structure for Nano-TiO<sub>2</sub> in cosmetics and sunscreens.

Table 7. Main titanium dioxide nanoparticles suppliers, products, primary particle size.

Table 8. Development of photocatalytic coatings, by generation.

Table 9. Advanced coating applied in the building and construction industry.

Table 10. Types of fillers in self-sensing concrete.

Table 11. Applications of self-sensing concrete.

Table 12. Demand for titanium dioxide nanoparticles/powders, conservative and optimistic estimates (tons).

## I would like to order

Product name: The Global Market for Titanium Dioxide Nanoparticles 2023-2033

Product link: <https://marketpublishers.com/r/G276D4A2A577EN.html>

Price: US\$ 1,000.00 (Single User License / Electronic Delivery)

If you want to order Corporate License or Hard Copy, please, contact our Customer Service:

[info@marketpublishers.com](mailto:info@marketpublishers.com)

## Payment

To pay by Credit Card (Visa, MasterCard, American Express, PayPal), please, click button on product page <https://marketpublishers.com/r/G276D4A2A577EN.html>

To pay by Wire Transfer, please, fill in your contact details in the form below:

First name:  
Last name:  
Email:  
Company:  
Address:  
City:  
Zip code:  
Country:
