Abstracts

The rapid boom in smart wearable and integrated electronic devices has stimulated demand for advanced intelligent systems with high performance, micro size, mechanical flexibility, and high-temperature stability for application as flexible and stretchable displays, personal health monitoring, human motion capturing, smart textiles, electronic skins and more.

Wearable technology, wearables, or wearable devices is incorporation electronics into clothing or accessories that can be worn on a user's body. The purpose of wearable technologies is to provide entertainment, healthcare, and education in people's daily lives. Wearable electronics encompasses the incorporation of technological components in clothing accessories or objects we carry. The development of next-generation, wearable flexible electronics relies on novel materials that are:

Mechanically flexible.

Low-cost.

Electrically conductive.

Optically transparent.

There is increasing demand for wearable electronics from industries such as:

Medical and healthcare monitoring and diagnostics.

Sportswear and fitness monitoring (bands).

Consumer electronics such as smart watches, smart glasses and headsets.

Military GPS trackers, equipment (helmets) and wearable robots.

Smart apparel and footwear in fashion and sport.

Workplace safety and manufacturing.

The development of printed, flexible and stretchable conductors over the last decade has resulted in commercialization of flexible and stretchable sensors, circuits, displays, and energy harvesters for next-generation wearables and soft robotics. These systems must be able to conform to the shape of and survive the environment in which they must operate. They are typically fabricated on flexible plastic substrates or are printed/woven into fabrics.

The electronics industry is moving at a fast pace from standard, inflexible form factors to stretchable and conformable devices. Printed, flexible and stretchable electronics products are increasing weekly from wearables for healthcare to smart packaging, sensors, automotive tail lights and displays, flexible displays, photovoltaics and more.

Based on a new generation of advanced materials, printed, flexible and stretchable sensors and electronics will enable new possibilities in a diverse range of industries from healthcare to automotive to buildings. These technologies will drive innovation in smart medical technology, automotive, smart manufacturing, Internet of Things (IoT) and consumer electronics.

In the flexible displays market, electronics giants such as Samsung and LG Electronics are rolling out flexible, foldable and rollable smartphone and tablet products. LG's rollable LG Signature's OLED TV R will be available in 2020 and foldable smartphones have already come to market.

Wearable and mobile health monitoring technologies have recently received enormous interest worldwide due to the rapidly aging global populations and the drastically increasing demand for in-home healthcare. Commercially available and near commercial wearable devices facilitate the transmission of biomedical informatics and personal health recording. Body worn sensors, which can provide real-time continuous

measurement of pertinent physiological parameters noninvasively and comfortably for extended periods of time, are of crucial importance for emerging applications of mobile medicine. Wearable sensors that can wirelessly provide pertinent health information while remaining unobtrusive, comfortable, low cost, and easy to operate and interpret, play an essential role.

Battery and electronics producers require thin, flexible energy storage and conversion devices to power their wearable technology. The growth in flexible electronics has resulted in increased demand for flexible, stretchable, bendable, rollable and foldable batteries and supercapacitors as power sources for application in flexible and wearable devices.

Many major companies have integrated conductive and electronic ink and materials in applications ranging from photovoltaics to smart packaging. There are over 100 companies with products in this space for RFID, smart clothing, sensors, antennas and transistors. As well as advancing product security and consumer interaction, the use of smart inks and coatings in active and intelligent packaging can help reduce food waste and improve medical compliance-which would have significant environmental benefits.

Report contents include:

Current applications, state of the art, market and products (including producers, functionalities, prices) in wearable electronics, medical and healthcare monitoring, electronics and smart textiles, energy for wearables, flexible, foldable and stretchable displays and conductive inks.

Advanced materials used in wearables, displays, printed, flexible, foldable and stretchable electronics and sensors.

Stage of commercialization for applications, from basic research to market entry. Markets covered include conductive inks, wearables and IoT, medical & healthcare sensors, electronic clothing & smart apparel, energy harvesting & storage, electronics components and flexible displays.

Market figures for printable, flexible and stretchable electronics, by markets, materials and applications to 2027. Market impact of COVID-19 assessed.

Profiles of over 400 product developers.

60 companies profiled in wearables including BeBop Sensors, dorsaVi Ltd., Epicore Biosystems, Equivital Inc., FeelIT, Hitachi, Ltd., Holst Centre, Magic Leap, miomove s.r.o and more. All smart watch and fitness tracker products profiled including functionalities and prices.

134 companies profiled in medical and healthcare wearables including 1drop Inc., Abbott, AerBetic, Inc., Alertgy, Aura Devices, Biobeat, BioIntelliSense, Cardiomo, CareWear, cosinuss, Dexcom, Embr Labs, Eccrine Systems, Gentag, i-Sens, WBD101 and more.

102 companies profiled in electronic textiles (E-textiles) including Ambiotex, BloomerTech, Chronolife, clim8, Emglare, Formosa Taffeta, Healthwatch Technologies, Hexoskin, Inuheat, Litex, Myant, SankiConsys Co., Ltd. and more.

32 companies profiled in energy storage and harvesting including Bionic Power, BrightVolt, Canatu Oy, ChivoTech, Enfucell Oy, Jenax, LG Chem and more.

57 companies profiled in printed, flexible and stretchable displays including C3Nano, Cambrios, iBeam, CurveSYS GmbH, Etulipa, Futaba, Kyulux, Samsung and more.

98 companies profiled in conductive ink including Ash Chemical, Cemedine, DuPont, EMS/Nagase, Henkel, Jujo Chemical, Panasonic, Taiyo, Toyobo, VFP Ink Technologies, and more.

Contents

1 EXECUTIVE SUMMARY

- 1.1 The evolution of electronics
 - 1.1.1 The wearables revolution
 - 1.1.2 Wearable market leaders
 - 1.1.3 Flexible, stretchable, thin, and large-area form factors
- 1.2 What are flexible and stretchable electronics?
 - 1.2.1 From rigid to flexible and stretchable
 - 1.2.2 Organic and printed electronics
 - 1.2.3 New conductive materials
 - 1.2.4 Foldable smartphones and tablets
- 1.3 Growth in flexible and stretchable electronics market
 - 1.3.1 Recent growth in Printed, flexible and stretchable products
 - 1.3.2 Future growth
 - 1.3.3 Nanotechnology as a market driver
 - 1.3.4 Growth in remote health monitoring and diagnostics

2 RESEARCH METHODOLOGY

3 WEARABLE ELECTRONICS

3.1 MARKET DRIVERS AND TRENDS

3.2 APPLICATIONS

- 3.2.1 Smartwatches
 - 3.2.1.1 Main smart watch producers and products
- 3.2.2 Sports and fitness trackers
 - 3.2.2.1 Products
- 3.2.3 Sleep trackers and wearable monitors
 - 3.2.3.1 Products
- 3.2.4 Smart glasses and head-mounted displays (VR, AR, MR, vision loss and eye trackers)
 - 3.2.4.1 Products
- 3.2.5 Military
- 3.2.6 Industrial and workplace monitoring
- 3.2.7 Flexible and stretchable electronics in wearables
- 3.2.8 Stretchable artificial skin

3.3 GLOBAL MARKET SIZE

3.4 MARKET CHALLENGES

3.5 COMPANY PROFILES 86 (60 company profiles)

4 MEDICAL AND HEALTHCARE SENSORS AND WEARABLES

4.1 MARKET DRIVERS

4.2 CURRENT STATE OF THE ART

4.2.1 Monitoring solutions to track COVID-19 symptoms

4.2.1.1 Temperature and respiratory rate monitoring

4.3 APPLICATIONS

4.3.1 Companies and products

4.3.2 Electronic skin patches

4.3.3 Nanomaterials-based devices

4.3.4 Wearable health alert and monitoring devices

4.3.5 Continuous glucose monitoring (CGM)

4.3.5.1 Minimally-invasive CGM sensors

4.3.5.2 Non-invasive CGM sensors

4.3.5.3 Companies and products

4.3.6 Cardiovascular

4.3.6.1 ECG sensors

4.3.6.2 PPG sensors

4.3.7 Pregnancy and newborn monitoring

4.3.8 Wearable temperature monitoring

4.3.9 Hydration sensors

4.3.10 Wearable sweat sensors (medical and sports)

4.3.10.1 Products

4.3.11 Wearable drug delivery

4.3.12 Cosmetics patches

4.4 Smart footwear

4.5 Smart contact lenses

4.6 Smart wound care

4.7 Wearable exoskeletons

4.8 Medical hearables

4.9 GLOBAL MARKET SIZE

4.10 MARKET CHALLENGES

4.11 COMPANY PROFILES 175 (134 company profiles)

5 ELECTRONIC TEXTILES (E-TEXTILES) AND SMART TEXTILES

5.1 MARKET DRIVERS

5.2 MATERIALS AND COMPONENTS

5.2.1 Conductive and stretchable yarns

5.2.2 Conductive polymers

5.2.2.1 PDMS

5.2.2.2 PEDOT: PSS

5.2.3 Conductive coatings

5.2.4 Conductive inks

5.2.5 Nanomaterials

5.2.5.1 Nanocoatings in smart textiles

5.2.5.2 Graphene

5.2.5.3 Nanofibers

5.2.5.4 Carbon nanotubes

5.2.6 Phase change materials

5.2.6.1 Temperature controlled fabrics

5.3 APPLICATIONS, MARKETS AND PRODUCTS

5.3.1 Smart clothing products

5.3.2 Temperature monitoring and regulation

5.3.2.1 Heated clothing

5.4 Stretchable E-fabrics

5.4.1 Therapeutic products

5.4.2 Sport & fitness

5.4.3 Smart footwear

5.4.4 Military/Defence

5.4.5 Medical and healthcare

5.4.5.1 Wearable health monitoring

5.4.5.1.1 Companies and products

5.4.5.2 Monitoring solutions to track COVID-19 symptoms

5.4.5.3 Temperature and respiratory rate monitoring

5.4.5.4 Pregnancy and newborn monitoring

5.4.5.5 Biometric monitoring

5.4.5.6 ECG sensors

5.4.5.7 Smart wound care

5.4.6 Industrial and workplace monitoring

5.4.7 Flexible and wearable display advertising

5.4.8 Textile-based lighting

5.4.8.1 OLEDs

5.4.9 Antimicrobial textiles

5.4.9.1 Nanosilver

- 5.4.9.2 Zinc oxide
- 5.4.9.3 Chitosan
- 5.4.10 Smart diapers
- 5.4.11 Protective clothing
- 5.4.12 Automotive interiors
- 5.4.13 Powering E-textiles
 - 5.4.13.1 Batteries
 - 5.4.13.2 Supercapacitors
 - 5.4.13.3 Energy harvesting
 - 5.4.13.3.1 Photovoltaic solar textiles
 - 5.4.13.3.2 Energy harvesting nanogenerators
 - 5.4.13.3.2.1 TENGs
 - 5.4.13.3.2.2 PENGs
 - 5.4.13.3.3 Radio frequency (RF) energy harvesting
- 5.5 GLOBAL MARKET SIZE
- 5.6 MARKET CHALLENGES
- 5.7 COMPANY PROFILES 338 (102 company profiles)

6 PRINTED, FLEXIBLE AND STRETCHABLE ENERGY STORAGE AND HARVESTING

- 6.1 MARKET DRIVERS AND TRENDS
- 6.2 CURRENT STATE OF THE ART
 - 6.2.1 Products
 - 6.2.2 Nanomaterials
- 6.3 APPLICATIONS
 - 6.3.1 Flexible and stretchable batteries in electronics
 - 6.3.1.1 Flexible and stretchable LIBs
 - 6.3.1.1.1 Fiber-shaped Lithium-Ion batteries
 - 6.3.1.1.2 Stretchable lithium-ion batteries
 - 6.3.1.1.3 Origami and kirigami lithium-ion batteries
 - 6.3.1.2 Flexible Zn-based batteries (ZIBs)
 - 6.3.2 Flexible and stretchable supercapacitors
 - 6.3.2.1 Materials
 - 6.3.3 3D Printed batteries
 - 6.3.4 Stretchable heaters
 - 6.3.5 Flexible and stretchable solar cells
 - 6.3.6 Stretchable nanogenerators
 - 6.3.6.1 TENGs

6.3.6.2 PENGs

6.3.7 Photovoltaic solar textiles

6.4 GLOBAL MARKET SIZE

6.5 MARKET CHALLENGES

6.6 COMPANY PROFILES 436 (33 company profiles)

7 PRINTED, FLEXIBLE AND STRETCHABLE DISPLAYS AND CONSUMER ELECTRONICS

7.1 MARKET DRIVERS

7.2 CURRENT STATE OF THE ART

7.2.1 Printed, flexible and stretchable circuit boards and interconnects

7.2.2 Printed, flexible and stretchable transistors

7.3 APPLICATIONS

7.3.1 Flexible AMOLEDs

7.3.2 Flexible PMOLED (Passive Matrix OLED)

7.3.3 Foldable and rollable OLED smartphones

7.3.4 Foldable and rollable OLED displays

7.3.5 Transparent displays

7.3.6 Curved automotive displays

7.3.7 Flexible and wearable display advertising

7.3.8 Flexible OLED lighting

7.3.9 Flexible quantum dot displays

7.3.9.1 Quantum dot enhancement film (QDEF) for current QLEDs

7.3.9.2 Quantum Dot on Glass (QDOG)

7.3.9.3 Quantum dot colour filters

7.3.9.4 Quantum dots on-chip

7.3.9.5 Electroluminescent quantum dots

7.3.9.6 QD-Micro-LEDs

7.3.10 Flexible electrophoretic displays

7.3.11 Electrowetting displays

7.3.12 Electrochromic Displays

7.3.12.1 Inorganic metal oxides

7.3.12.2 Organic EC materials

7.3.12.3 Nanomaterials

7.3.13 Flexible organic liquid crystal displays (OLCD)

7.4 GLOBAL MARKET SIZE

7.5 MARKET CHALLENGES

7.6 COMPANY PROFILES 486 (47 company profiles)

8 CONDUCTIVE INKS

8.1 MARKET DRIVERS

8.2 CONDUCTIVE INK TYPES

8.2.1 Conductive ink materials

8.3 PRINTING METHODS

8.3.1 Nanoparticle ink

8.4 Sintering

8.5 Conductive Filaments

8.6 Conductive films, foils and grids

8.7 Inkjet printing in flexible electronics

8.8 Drawn-on-skin electronics

8.9 CURRENT STATE OF THE ART

8.9.1 Current products

8.10 APPLICATIONS

8.10.1 Comparative properties

8.10.2 Nanomaterials in conductive inks

8.10.2.1 Graphene conductive inks

8.10.3 RFID

8.10.3.1 Printed RFID antennae

8.10.4 Smart labels

8.10.5 Smart clothing and electronic textiles

8.10.6 Printed sensors

8.10.6.1 Strain sensors

8.10.7 Printed batteries

8.10.8 In-mold electronics

8.10.9 Printed transistors

8.11 GLOBAL MARKET SIZE

8.12 COMPANY PROFILES 539 (98 company profiles)

9 PRINTED, FLEXIBLE AND STRETCHABLE ELECTRONIC MATERIALS AND COMPOSITES

9.1 TRANSPARENT CONDUCTIVE FILMS (TCFs)

9.2 CARBON NANOTUBES

9.2.1 Properties

9.2.2 Properties utilized in Printed, flexible and stretchable electronics

9.2.2.1 Single-walled carbon nanotubes (SWCNT)

9.2.2.2 Double-walled carbon nanotubes

9.2.3 Applications in printed, flexible and stretchable electronics

9.3 CONDUCTIVE POLYMERS (CP)

9.3.1 Properties

9.3.1.1 PDMS

9.3.1.2 PEDOT: PSS

9.3.1.2.1 Transparency

9.3.2 Properties utilized in Printed, flexible and stretchable electronics

9.3.3 Applications in Printed, flexible and stretchable electronics

9.4 GRAPHENE

9.4.1 Properties

9.4.2 Properties utilized in Printed, flexible and stretchable electronics

9.4.3 Applications in Printed, flexible and stretchable electronics

9.4.3.1 Electrodes

9.4.3.2 Sensors

9.5 METAL MESH

9.5.1 Properties

9.5.2 Properties utilized in Printed, flexible and stretchable electronics

9.5.3 Applications in Printed, flexible and stretchable electronics

9.6 SILVER INK (Flake, nanoparticles, nanowires, ion)

9.6.1 Silver flake

9.6.2 Silver (Ag) nanoparticle ink

9.6.2.1 Conductivity

9.6.3 Silver nanowires

9.6.4 Prices

9.6.4.1 Cost for printed area

9.7 COPPER INK

9.7.1 Silver-coated copper

9.7.2 Copper (Cu) nanoparticle ink

9.7.3 Prices

9.8 NANOCELLULOSE

9.8.1 Properties

9.8.2 Properties utilized in Printed, flexible and stretchable electronics

9.8.2.1 Cellulose nanofibers CNF

9.8.2.2 Cellulose nanocrystals (CNC)

9.8.3 Applications in Printed, flexible and stretchable electronics

9.8.3.1 Nanopaper

9.8.3.2 Paper memory

9.8.3.3 Conductive inks

9.9 NANOFIBERS

9.9.1 Properties

9.9.2 Properties utilized in Printed, flexible and stretchable electronics

9.9.3 Applications in Printed, flexible and stretchable electronics

9.10 GRAPHENE QUANTUM DOTS

9.10.1 Synthesis

9.10.2 Recent synthesis methods

9.11 ELECTROACTIVE POLYMERS (EAPS)

9.11.1 Properties

9.12 PEROVSKITE QUANTUM DOTS (PQDs)

9.12.1 Properties

9.12.2 Comparison to conventional quantum dots

9.12.3 Synthesis methods

9.12.4 Applications

9.12.4.1 Displays

9.13 OTHER TYPES

9.13.1 Gold (Au) nanoparticle ink

9.13.2 Siloxane inks

9.13.3 Copper nanowires

9.14 OTHER 2-D MATERIALS

9.14.1 BOROPHENE

9.14.1.1 Properties

9.14.1.2 Applications

9.14.2 BLACK PHOSPHORUS/PHOSPHORENE

9.14.2.1 Properties

9.14.2.2 Applications in Printed, flexible and stretchable electronics

9.14.3 GRAPHITIC CARBON NITRIDE (g-C₃N₄)

9.14.3.1 Properties

9.14.3.2 Applications in Printed, flexible and stretchable electronics

9.14.4 GERMANENE

9.14.4.1 Properties

9.14.4.2 Applications in Printed, flexible and stretchable electronics

9.14.5 GRAPHDIYNE

9.14.5.1 Properties

9.14.5.2 Applications in Printed, flexible and stretchable electronics

9.14.6 GRAPHANE

9.14.6.1 Properties

9.14.6.2 Applications in Printed, flexible and stretchable electronics

9.14.7 HEXAGONAL BORON NITRIDE

- 9.14.7.1 Properties
- 9.14.7.2 Applications in Printed, flexible and stretchable electronics
- 9.14.8 MOLYBDENUM DISULFIDE (MoS₂)
 - 9.14.8.1 Properties
 - 9.14.8.2 Applications in Printed, flexible and stretchable electronics
- 9.14.9 RHENIUM DISULFIDE (ReS₂) AND DISELENIDE (ReSe₂)
 - 9.14.9.1 Properties
 - 9.14.9.2 Applications in Printed, flexible and stretchable electronics
- 9.14.10 SILICENE
 - 9.14.10.1 Properties
 - 9.14.10.2 Applications in Printed, flexible and stretchable electronics
- 9.14.11 STANENE/TINENE
 - 9.14.11.1 Properties
 - 9.14.11.2 Applications in Printed, flexible and stretchable electronics
- 9.14.12 TUNGSTEN DISELENIDE
 - 9.14.12.1 Properties
 - 9.14.12.2 Applications in Printed, flexible and stretchable electronics
- 9.14.13 ANTIMONENE
 - 9.14.13.1 Properties
 - 9.14.13.2 Applications
- 9.14.14 INDIUM SELENIDE
 - 9.14.14.1 Properties
 - 9.14.14.2 Applications

Product name: The Global Market for Wearable, Printed, Flexible, Foldable and Stretchable Electronics

Product link: <https://marketpublishers.com/r/G50BEDCC5C94EN.html>

Price: US\$ 2,000.00 (Single User License / Electronic Delivery)

If you want to order Corporate License or Hard Copy, please, contact our Customer Service:

info@marketpublishers.com

Payment

To pay by Credit Card (Visa, MasterCard, American Express, PayPal), please, click button on product page <https://marketpublishers.com/r/G50BEDCC5C94EN.html>

To pay by Wire Transfer, please, fill in your contact details in the form below:
