Abstracts

The market for zinc oxide nanoparticles (Nano-ZnO) continues to grow, mainly driven by the demand for UVA/B filters in sunscreens and sun protection cosmetics. There has been an increasing demand over the past 18 months from brand owners for non-chemical UVA/B filters and this trend is expected to continue as regulatory hurdles are surmounted.

The Nano-ZnO market is dominated by multi-national chemicals and advanced materials companies, who mainly supply brand owners and contract manufacturers in the the ultraviolet (UV)-protection markets, principally in cosmetics and sunscreens, in multi-ton quantities. Secondary markets they sell to include academia and research, paints, coatings, biomedicine and automotive.

What does the report include?

Zinc oxide nanoparticles properties, advantages and synthesis.

Comprehensive quantitative data and forecasts for the main end user markets for zinc oxide nanoparticles including cosmetics & sunscreens, coatings and paints and anti-bacterials (hygiene surfaces and textiles).

Qualitative insight and perspective on the current market and future trends in end user markets

Regulations and safety
