Abstracts

The global nanocellulose market, encompassing Cellulose nanofibers (CNF) and Microfibrillated Cellulose (MFC), Cellulose nanocrystals (CNC) and Bacterial cellulose (BC), has accelerated over the last few years as producers in Japan and to a lesser extent North America and Europe bring products to market. The development of these remarkable materials has compelled major paper and pulp producers to gravitate their traditional business towards advanced biorefineries, which have met with initial success and resulted in production capacity increases.

These bio-based materials are abundant, renewable and inexpensive but are extremely strong, durable, and lightweight, non-toxic and are lower cost than other advanced materials and nanomaterials. Used as a materials additive and in composites, nanocellulose will help to drive the global move away from oil-based plastics and products to sustainable, bio-based alternatives.

Future Markets, Inc., publisher of the first ever market report on Nanocellulose in 2011, presents The Nanocellulose Report 2020, the most comprehensive and up-to date report on nanocellulose currently available, by the world's leading market authority on nanocellulose. Profiling over 90 companies, the report provides key information for investors and executives to enable them to understand and take advantage of the opportunities provided by nanocellulose.

Purchasers of The Nanocellulose Report 2020 will receive updates for 12 months (access to online file repository) an. A must-have for anyone interested in the business and investment opportunities in nanocellulose, The Nanocellulose Report 2020 contains:
