Date: July 2017

Pages: 150

Price: US\$ 997.00 (Single User License)

ID: I47B62962DAEN

Abstracts

The ISO 14001 + OHSAS 18001 Certification is needed for registration. It is also tailored for those organizations which do not want to train their own internal auditors. Some of the situations in which internal auditors are not required include:

There are trained auditors on staff

They will be trained elsewhere

An outside consultant will perform the audits, at least for the first year

There are not enough employees to perform internal audits (These standards do not allow someone to audit their own work)

The ISO 14001 + OHSAS 18001 Small Business Package enables an organization's end product to be an Environmental, Health & Safety Management System that works for them and helps their company continually improve its processes.

Advantages of ISO 14001 + OHSAS 18001 Small Business Package

This is a globally applicable set of standards

Efficiently and effectively designed

Save time:

The documented Integrated Management System (IMS) is organized for the user. EHS Manual, Procedures & Forms are fully written and ready for customization. They contain guidance so you know what to edit and examples are provided.

Save money:

The ISO 14001 + OHSAS 18001 Small Business Package ensures that there is no need for organizations to hire consultants to develop a system or to train its employees

Implementing the ISO 14001 + OHSAS 18001 Small Business Package will familiarize organizations with the requirements of the standard and how to implement them.

Organizations can also train their employees in house through a convenient mode such as PowerPoint or online training.

Certification to ISO 14001 + OHSAS 18001 Small Business Package demonstrates, both internally and externally, a commitment to maintain or improve the way in which you manage health and safety within your small business organization.

Setting targets through an organizational health and safety policy, together with ongoing measurement against it, supports a process of continual improvement, enabled by the standard's 'Plan, Do, Check, Act' framework.

Plan: identify and address risks, including setting and planning for objectives and changes to support continual improvement

Do: Controls need to be identified for OHSAS, requirements need to be identified, designs developed, controls placed on externally provided processes, products and services

Check: monitor, measure, analyze and evaluate the products or services to ensure they meet requirements, the processes used are adequate and effective, and customer satisfaction is being met

Act: Action in this case involves the actions needed to address any issues found in the check step

Contents

It covers the following areas:
