Abstracts

Caffeine is the world's most popular drug. It is the most commonly consumed psychoactive substance in the world. Caffeine is a substance that is naturally produced in the leaves and seeds of many plants, including coffee beans, guarana, yerba maté, cacao beans, and tea. Caffeine is determined as a drug because it is a central nervous system stimulant. It is used to provide a boost of energy, causing increased alertness. Caffeine gives most people a temporary energy boost and elevates mood, and is also used to stay awake longer. Caffeine (C₈H₁₀N₄O₂) is the common name for trimethylxanthine. It is a bitter, white crystalline xanthine alkaloid that is a psychoactive stimulant drug. Caffeine was discovered by a German chemist, Friedrich Ferdinand Runge, in 1819. He coined the term kaffein, a chemical compound in coffee, which in English became caffeine. Caffeine is also part of the chemical mixtures and insoluble complexes guaranine found in guarana, mateine found in mate, and theine found in non-herbal tea; all of which contain additional alkaloids such as the cardiac stimulants theophylline and theobromine, and often other chemicals such as polyphenols which can form insoluble complexes with caffeine.
