## Abstracts

Grain protectant insecticides are a type of pesticide specifically formulated to protect stored grains from insect infestations. These insecticides are applied to grains during storage to prevent or control the growth and reproduction of pests such as beetles, weevils, moths, and mites. Insect infestations in stored grains can lead to significant economic losses for farmers, grain handlers, and food processors. Grain protectant insecticides provide an effective and cost-efficient solution to control pests and minimize financial losses. The global population is increasing, and ensuring food security is a top priority. Grain protectant insecticides help prevent insect infestations in stored grains, reducing post-harvest losses and preserving the quality and quantity of food supplies.
