## Abstracts

Antioxidants are substances that are used in various industries and applications to prevent or slow down the degradation of materials caused by oxidation. Oxidation is a chemical reaction that occurs when materials are exposed to oxygen, heat, and light, and can cause changes in the physical and chemical properties of materials, such as color changes, loss of strength, and degradation of performance. Antioxidants work by inhibiting or slowing down the oxidation process, either by scavenging free radicals that are produced during oxidation or by preventing the formation of free radicals. They can be added to materials such as plastics, rubber, fuels, and lubricants to improve their stability, durability, and performance. The global antioxidants market is expected to increase by USD 2.0 billion, at a compound annual growth rate (CAGR) of 4.4% from 2023 to 2029, according to the latest edition of the Global Antioxidants Market Report.
