Abstracts

Aramid fibers are man-made high-performance fibers, with molecules that are characterized by relatively rigid polymer chains. These molecules are linked by strong hydrogen bonds that transfer mechanical stress very efficiently, making it possible to use chains of relatively low molecular weight. Para-aramid and meta-aramid yarns have outstanding reinforcement properties and offer exceptional resistance to thermal, dynamic and chemical damage. Hoses reinforced with these fibers are strong, durable and can be used under the toughest conditions in the modern era of maintenance-free cars. The global aramid fiber for automotive hoses market is expected to increase by USD 52.6 million, at a compound annual growth rate (CAGR) of 6.2% from 2023 to 2029, according to the latest edition of the Global Aramid Fiber for Automotive Hoses Market Report.
