## Abstracts

Aramid fibers are a class of extremely resilient and heat-resistant synthetic fibers. Aramids have a polar aromatic polymer backbone, which results in a much higher glass transition temperature and no melting point. Due to the aromatic structure, aramid fibers have excellent heat resistance, very low flammability, and good chemical resistance to most organic solvents. Aramid fibers have found use in protective clothing, ropes and webbing, rubber and plastic reinforcements for hoses, tires and belts, high performance sporting goods, optical fibers, heat-resistant filters, etc. According to market research study published by Gen Consulting Company, the market size of the global aramid fibers sector is expected to rise by USD 1.5 billion with a CAGR of 5.4% by the end of 2029.
