Abstracts

A soap dispenser is a device that dispenses soap for hand hygiene purposes in residential, institutional or commercial settings such as hospitals, schools, restaurants, government and offices. This type of dispenser is designed to reduce the amount of soap used per hand wash while still providing effective cleaning. There are two main types of soap dispensers: standard and automatic. An automatic soap dispenser is a touch-free device that dispenses soap without the need for physical contact. These types of dispensers are becoming increasingly popular in commercial settings due to their hygiene benefits. In terms of hygiene, an automatic soap dispenser is a significant improvement over traditional soap dispensers. With a touchless soap dispenser, users do not have to touch any surfaces, reducing the risk of spreading germs and bacteria. This is especially important in public restrooms, where many people touch the same surfaces. The global automatic soap dispenser market size is projected to grow by USD 267.6 million from 2023 to 2029, registering a CAGR of 5.8 percent, according to the latest market data.
