Abstracts

Faucet, or tap, is a type of valve that controls the release of liquids, mostly water in a regular home. Modern faucets vary in shape, size and the way they function. A recent improvement in faucets is automation and electrification. For instance, in some public toilets, users don't have to touch the faucets as they turn on by themselves. This is very hygienic as people don't have to potentially contract germs from previous users.

The global basin faucet market size was valued at \$9,290.02 million in 2019 and is projected to reach \$11,428.27 million by 2026, registering a CAGR of 4.23% from 2020 to 2026. The best opportunities in the global basin faucet market through 2026 will be seen for both residential and commercial building in developing countries. A number of low income and developing countries have large construction projects currently active or planned, which will support a moderate rate of growth.

The basin faucet market is segmented on the basis of product, application, and region. The report offers a breakdown of market shares by product, including Manual Faucet, Induction Faucet.
