Abstracts

BOPP (biaxially oriented polypropylene) film is a thin, flexible, and transparent plastic film made from polypropylene. It is produced by a process called biaxial orientation, which involves stretching the film in both the machine and transverse directions. This process gives the film its unique properties, including high tensile strength, clarity, and resistance to moisture, chemicals, and heat. BOPP film is widely used in packaging, labeling, and lamination applications. It can be printed on, coated, and laminated with other materials to create a variety of packaging solutions, such as bags, pouches, and wraps. BOPP film is also commonly used for labeling applications, including product labels, adhesive tapes, and stickers. In addition to its packaging and labeling applications, BOPP film is also used in the production of capacitor films, battery separators, and other industrial applications. According to the latest research, the global BOPP film market is poised to grow by USD 8.5 billion during 2023-2029, progressing at a CAGR of 5.2% during the forecast period.
