Abstracts

A biopsy is the removal of tissue from any part of the body to examine it for disease. Some may remove a small tissue sample with a needle while others may surgically remove a suspicious nodule or lump. Biopsies are frequently used to diagnose cancer, but they can help identify other conditions such as infections and inflammatory and autoimmune disorders. They may also be done to match organ tissue before a transplant and to look for signs of organ rejection following a transplant. Gen Consulting Company estimates the global cancer biopsy market will total USD 43,692 million by 2028, an average annual growth of 10.7 percent during the forecast period, according to the latest edition of the Global Cancer Biopsy Market Report.
