Abstracts

Cancer is a disease in which some of the body's cells grow uncontrollably and spread to other parts of the body. It is the second leading cause of death globally, accounting for an estimated 9.6 million deaths, or one in six deaths, in 2018. Between 30% and 50% of cancer deaths could be prevented by modifying or avoiding key risk factors and implementing existing evidence-based prevention strategies. Early diagnosis improves cancer outcomes by providing care at the earliest possible stage and is therefore an important public health strategy in all settings. According to latest analysis by Gen Consulting Company, the global cancer diagnostics market is poised to grow by USD 75 billion during 2022-2028, progressing at a CAGR of 6.2% during the forecast period.
