## Abstracts

A capacitor sensor is one type of proximity sensor used to detect nearby objects through their electrical field effect formed through the sensor. This sensor can simply detect & measure different things like motion, chemical composition, displacement, electric field & indirectly detect many other variables which can be changed into dielectric constant or motion like acceleration, pressure, fluid composition & fluid level. According to latest analysis by Gen Consulting Company, the global capacitive sensors market is poised to grow by USD 10.3 billion during 2022-2028, progressing at a CAGR of 5.3% during the forecast period.
