## Abstracts

Carborane is a class of thermally stable compounds with the formula  $B_nC_2H_{n+2}$ . The carboranes have polyhedral molecular structures based on networks of boron and carbon atoms, in which the carbon atoms occupy adjacent positions. Currently, many thousands of carboranes have been prepared, and they have been combined with transition metals to yield derivatives called metallocarboranes, some of which show catalytic activity.

The global carborane market size was valued at \$0.86 million in 2019 and is projected to reach \$1.18 million by 2026, registering a CAGR of 6.5% from 2020 to 2026. Growing potential for carborane derivatives in healthcare and advanced material sectors is the chief contributor for the growth of the market.

The carborane market is segmented on the basis of application, and region. By application, the carborane market is classified into Rocket Propellant, Boron Neutron Capture Therapy, BNCT, Advanced Polymers.
