## Abstracts

Chlortetracycline is a tetracycline antibiotic, the first tetracycline to be identified. It was discovered in 1945 by Benjamin Minge Duggar working at Lederle Laboratories under the supervision of Yellapragada Subbarow. Duggar identified the antibiotic as the product of an actinomycete he cultured from a soil sample collected from Sanborn Field at the University of Missouri. The organism was named *Streptomyces aureofaciens* and the isolated drug, Aureomycin, because of their golden color. Chlortetracycline is a broad spectrum antibiotic with a variety of feeding levels for use in beef cattle, non-lactating dairy cattle, and sheep.
