## Abstracts

In a circular economy, materials for new products come from old products. As much as possible, everything is reused, re-manufactured or, as a last resort, recycled back into a raw material or used as a source of energy. In this way, the life cycle of products is extended. In practice, it implies reducing waste to a minimum. Projected to expand at a CAGR of 7.8% from 2021 to 2027, the global circular economy market will worth USD 657,111 million by 2027-end, according to Gen Consulting Company.
