Abstracts

Dermatological therapeutics encompasses the medical interventions and treatments used to address a wide range of skin conditions, including acne, eczema, psoriasis, dermatitis, skin infections, skin cancer, and other dermatological disorders. It involves the use of pharmaceuticals, topical agents, and procedures to alleviate symptoms, promote healing, and improve the overall health and appearance of the skin.

The global dermatological therapeutics market is projected to rise by USD 21.5 billion by 2029, according to the latest market study results. It is anticipated to expand at a CAGR of 7.9 percent during the forecast period. Skin disorders are common worldwide, affecting millions of people. The increasing prevalence of skin conditions, such as acne, eczema, and psoriasis, drives the demand for dermatological therapeutics. The global population is aging, leading to an increased incidence of age-related skin conditions, including wrinkles, age spots, and skin cancer. The growing aging population contributes to the demand for dermatological therapeutics aimed at addressing these concerns and maintaining skin health.
