Abstracts

Device as a Service (DaaS) is an emerging supply chain model that gives customers more flexibility, and helps providers unlock new revenue streams. With DaaS, vendors take laptops, desktop PCs, and other devices and preconfigure and customize them with productivity and security applications as well as value-added services to ready them for business or consumer customers. The devices aren't purchased outright by companies like in the past, but are paid for on a consumption model. According to latest analysis by Gen Consulting Company, the global device as a service market is projected to climb to USD 216,790 million by 2027-end, progressing at a CAGR of 34.5% during 2021-2027.
