Abstracts

3,4-Dimethylpyrazole phosphate (DMPP, CAS 202842-98-6) is a new nitrification inhibitor (NI), the use of which is likely to reduce nitrogen (N) loss from leaching or denitrification and to improve N supply in agricultural land. DMPP is usually supplied pre-blended with fertilizers. According to Gen Consulting Company, global dimethylpyrazole phosphate market is projected to grow at a CAGR of 4.25% during the forecast period 2020-2026. The benefits of application of DMPP stabilized fertilizers, in terms of reduced nitrogen leaching over time, is expected to provide growth opportunities in the market during the forecast period.

Geographically, this report is segmented into several key regions, with sales, revenue, market share and growth rate of DMPP in these regions, from 2016 to 2026, covering Americas, Europe and Middle East & Africa (EMEA), Asia-Pacific. EMEA reckoned as the most significant regional market a in 2019, due to factors such as an increase in demand for highly efficient fertilizers in these well developed countries and the promotional activities by the government and its wide usage in crops. Asia Pacific is anticipated to be fastest DMPP regional market over the forecast period owing to reduced production costs, increasing government support and consumer awareness regarding use of enhanced efficiency fertilizers (EEF) to increase yield particularly in economies such as China and India. China is expected to emerge as leading consumer market for DMPP stabilized fertilizers over the foreseeable future. This is expected to augment DMPP demand in the region. Excellent results on crop achieved by DMPP stabilized fertilizers is anticipated to be another factor driving the DMPP growth in China.
