Abstracts

Electrophysiology (EP) catheters are used to diagnose and treat abnormalities in the timing and pattern of the heartbeat, referred to as “arrhythmia”, the most common of which is atrial fibrillation (AF). AF occurs when errant electrical signals cause the heart to beat quickly and irregularly. To confirm the diagnosis of AF and determine the most appropriate treatment, diagnostic EP catheters are often used, while EP ablation catheters are employed to create lesions to prevent the propagation of electrical signals that lead to certain arrhythmias.

The five-year forecast for the electrophysiology catheter market shows a healthy Compound Annual Growth Rate (CAGR) of 12.5 percent driven by increased incidence of cardiac arrhythmia, according to a new report published by Gen Consulting Company.

The report covers forecast and analysis for the electrophysiology catheter market on a global and regional level. The study provides historic data of 2012-2016 along with a forecast from 2017 to 2022 based on both output/volume and revenue. The study then describes the drivers and restraints for the electrophysiology catheter market along with the impact they have on the demand over the forecast period. Additionally, the report includes the study of opportunities available in the electrophysiology catheter market on a global level.

The report has been prepared based on the synthesis, analysis, and interpretation of information about the global electrophysiology catheter market collected from specialized sources. The competitive landscape section of the report provides a clear insight into the market share analysis of key industry players. Company overview, financial overview, product portfolio, new project launched, recent development analysis

are the parameters included in the profile.

Electrophysiology (EP) catheters by type can be categorized into Diagnostic EP Catheter (Conventional EP Diagnostic Catheters, Advanced EP Diagnostic Catheters, and Ultrasound EP Diagnostic Catheters) and Ablation EP Catheter (RF EP Ablation Catheters, Cryoablation EP Catheters, Laser Ablation Systems, and Microwave Ablation). All the segments have been analyzed based on present and future trends and the market is estimated from 2017 to 2022. Relevantly, the report and company profiles specify the key drivers that are impacting the demand in global electrophysiology catheter market.
