## Abstracts

Ethyleneamines are a class of amine compounds containing ethylene (-CH<sub>2</sub>CH<sub>2</sub>-) linkages between amine groups. These compounds are generally colorless, low-viscosity liquids with a fishy amine odor. Ethyleneamines are reactive with a variety of other chemicals, making them unique intermediates for a broad range of applications. Ethyleneamines are used primarily as reactive intermediates used to produce other useful chemical products.

The report covers forecast and analysis for the ethyleneamines market on a global and regional level. The study provides historic data of 2012-2016 along with a forecast from 2017 to 2022 based on both volumes and revenue. The study includes drivers and restraints for the ethyleneamines market along with the impact they have on the demand over the forecast period.
