Abstracts

FCCL is a substrate mainly used for processing flexible printed circuit board (FPC). And it is divided into two categories: the traditional three-layer soft board substrate (3L FCCL) containing adhesive and the new two-layer soft board substrate (2L FCCL) contains no adhesive. Apart from features such as excellent dielectric, bond strength, dimensional stability, flexible copper-clad laminate has prominent features as follows: flexible, can be used to dynamic connection; three dimensional wiring, reducing circuitry space.
