## Abstracts

Antioxidants are compounds that inhibit oxidation, a chemical reaction that can produce free radicals and chain reactions that may damage the cells of organisms. Antioxidants play a major role in ensuring that food products retain their taste and color and do not become poisonous over a long period. Their use is particularly important for avoiding oxidation of fats and fat-containing products. According to market research study published by Gen Consulting Company, the market size of the global food antioxidant sector is expected to rise by USD 173 million with a CAGR of 5.4% by the end of 2027.
