## Abstracts

Galacto-oligosaccharide (GOS) is a food ingredient with prebiotic properties, derived from cow's milk, it is a non-digestible carbohydrate. GOS is widely recognised to encourage the growth of beneficial bacteria. The most common use for GOS is as an ingredient in infant formula as it has been shown to help aid digestive health. Oligosaccharides are the third most prominent component in human breast milk after lactose and fat, hence GOS is added to infant formula to better emulate human breast milk.
