## Abstracts

High thermal conductivity graphite film is a thermal interface material which is very thin, synthetically made, has high thermal conductivity, and is made from a highly oriented graphite polymer film. It is ideal for providing thermal management/heatsinking in limited spaces or to provide supplemental heat-sinking in addition to conventional means. This material is flexible and can be cut into customizable shapes. This material can spread heat from a heat source quickly, and can decrease the temperature of it.
