## Abstracts

Intraoral scanners provide highly accurate 3D digital impressions of a patient's teeth and oral structures. This precision is essential for various dental applications, including the design and fabrication of dental restorations such as crowns, bridges, and orthodontic appliances. Compared to traditional impression-taking methods that involve bulky trays and impression materials, intraoral scanners offer a more comfortable experience for patients. The non-invasive nature of intraoral scanning can reduce patient anxiety and discomfort during dental procedures.

The global intraoral scanner market is anticipated to increase by USD 287.0 billion till 2029 at an average annual growth of 7.7 percent as per the latest market estimates.
