## Abstracts

Isononanol (INA) is the common name of Isononyl alcohol and is an isomer of the C9 family. It is produced from octene via formylation, hydrogenation, distillation, and refinement. The octene is formed by the dimerization of butene. INA is an odorous, flammable, and colorless liquid. It is only slightly soluble in water, but soluble in most organic solvents. Because of its alcohol characteristics, INA is a feedstock for the production of plasticizers, including DINP (Di-Isononyl Phthalate), DINCH (Di(isononyl)cyclohexane-1,2-dicarboxylate), DINA (Di-Isononyl Adipate), TINTM (Tri-Isononyl Trimellitate).

The five-year forecast for the INA market shows a Compound Annual Growth Rate (CAGR) of 4.3 percent driven by increased demand from emerging countries, according to a new report published by Gen Consulting Company.

The report covers forecast and analysis for the INA market on a global and regional level.
