Abstracts

A jaundice meter is an instrument that measure the yellowish pigmentation of the skin and other mucous membranes caused by hyperbilirubinemia (increased levels of bilirubin in the blood). Newborn jaundice occurs when a baby has a high level of bilirubin in the blood. Bilirubin is a yellow substance that the body creates when it replaces old red blood cells. The liver helps break down the substance so it can be removed from the body in the stool. A high level of bilirubin makes a baby's skin and whites of the eyes look yellow.
