Abstracts

Carnitine is a quaternary ammonium compound that is synthesized in the body from the amino acids lysine and methionine. Carnitine is found as two stereoisomers - L-carnitine and D-carnitine - which have the same molecular formula (C₇H₁₅NO₃), but different three-dimensional shapes. L-carnitine is the biologically active isomer. L-carnitine is naturally found at relatively high concentrations in certain foods such as red meat, beans, and avocado. L-Carnitine plays a vital role in the transportation of long-chain fatty into mitochondrial matrix in mammals. L-Carnitine has a wide range of applications in pharmaceutical, food products, and feed additives.
