Abstracts

Magnetic resonance imaging (MRI) is an advanced imaging technique used in medical field to produce high quality images of the soft tissues, organs of the human body. This device capture the images of body organs and tissues by applying the magnetic field and this images will give the information about whole human body system in both diseased and healthy condition. MRI does not involve x-rays, which distinguishes it from computed tomography (CT or CAT). While the hazards of x-rays are now well-controlled in most medical contexts, MRI still may be seen as superior to CT in this regard.
