## Abstracts

Lincomycin is an antibiotic that is used both in human and animals. It inhibits bacteria by suppressing protein synthesis and growth. Lincomycin and its derivatives share a similar mechanism of action. A related compound, clindamycin, is derived from lincomycin by using thionyl chloride to replace the 7-hydroxy group with a chlorine atom with inversion of chirality.

The report covers forecast and analysis for the lincomycin hydrochloride market on a global and regional level. The study provides historic data of 2012-2016 along with a forecast from 2017 to 2022 based on both volumes and revenue. The study includes drivers and restraints for the lincomycin hydrochloride market along with the impact they have on the demand over the forecast period. Additionally, the report includes the study of opportunities available in the lincomycin hydrochloride market on a global level.

The report has been prepared based on the synthesis, analysis, and interpretation of information about the global lincomycin hydrochloride market collected from specialized sources. The competitive landscape section of the report provides a clear insight into the market share analysis of key industry players. Company overview, financial overview, product portfolio, new project launched, recent development analysis are the parameters included in the profile.

The study provides a decisive view on the lincomycin hydrochloride market by segmenting the market based on applications. All the application segments have been analyzed based on present and future trends and the market is estimated from 2017 to 2022.
