Abstracts

Propylene glycol methyl ether, or PGME, is a clear, colorless liquid with an ether-like odor. PGME is completely soluble in water, with moderate volatility. Propylene glycol methyl ether is the fastest evaporating solvent in the glycol ether family. With very high water solubility and active solvency, propylene glycol methyl ether is widely used in coating and cleaning applications. It offers better viscosity reduction than heavier molecular weight glycol ethers and is particularly effective in epoxy and high solids acrylic systems. Thus, the primary use of PGME is in lacquers and paints. Use of PGME is anticipated to increase due to its low systemic toxicity.

The five-year forecast for the glycol mono methyl ether market shows a Compound Annual Growth Rate (CAGR) of 2.73 percent driven by increased demand from the PMA Production, Paints & Coatings, Cleaning Solvents, Electronics, and others segment, according to a new report published by Gen Consulting Company.
