Abstracts

Telehealth is the use of digital information and communication technologies to remotely access health care services and manage patient health care. Technology can include computers and mobile devices, such as tablets and smartphones. Telehealth has several advantages, including cost savings, convenience, and the ability to provide care to people with mobility limitations, or those in rural areas who don't have access to a local doctor or clinic. The global pediatric telehealth market is expected to increase by USD 5.0 billion, at a compound annual growth rate (CAGR) of 18.3% from 2023 to 2029, according to the latest edition of the Global Pediatric Telehealth Market Report. Pediatric telehealth appears poised to continue to be a strong care option. Strong continued uptake, favorable consumer perceptions, the regulatory environment, and strong investment in this area are all contributing to this adoption rate.
