## Abstracts

Plastics are derived from natural, organic materials such as cellulose, coal, natural gas, salt and, of course, crude oil. Plastic has the capability of being molded or shaped, usually by the application of heat and pressure. This property of plasticity, often found in combination with other special properties such as low density, low electrical conductivity, transparency, and toughness, allows plastics to be made into a great variety of products. According to Gen Consulting Company, the global plastics market is projected to reach USD 697,231 million, recording a CAGR of approximately 3.6 percent from 2022 to 2028.
