Abstracts

Polyolefin hot melt adhesives bond well to non-polar substrates such as polyethylene (PE) and polypropylene (PP). They possess superior barrier properties, lower moisture, and water vapor permeability along with excellent chemical resistance against polar solvents such as acid, bases, esters and alcohols. This facilitates the use of these adhesives in challenging applications such as polyolefin housing and parts in appliances, automotive and product assembly. According to Gen Consulting Company, global polyolefin HMA market is projected to grow at a CAGR of 5.8% during the forecast period 2020-2026.
