Abstracts

Polyurea greases are often the preferred choice for seal life applications. These greases tend to have high operating temperatures, inherent antioxidative properties, high thermal stability and low bleed characteristics. They also have a dropping point of approximately 270 degrees Celsius (518 degrees Fahrenheit). In addition, they are often preferred for motor lubrication because their formulation is not based on metal soap thickeners like lithium greases, which leave a wetter sediment when used up. On average, polyurea greases have a life expectancy three to five times better than lithium greases. The global polyurea grease market is projected to rise by USD 195.4 million by 2029, according to the latest market study results. It is anticipated to expand at a CAGR of 6.8 percent during the forecast period.
