## Abstracts

Prosthetics and orthotics are used to help individuals with physical disabilities or injuries to regain mobility, independence, and quality of life. They can also help to prevent further injury or damage to the body. Prosthetics and orthotics are typically made from lightweight materials such as carbon fiber, plastics, and metals, and are custom-fitted to each individual patient. The global prosthetics and orthotics market is likely to register a CAGR of over 4.95% with an incremental growth of USD 2.2 billion during the forecast period 2023-2029. The growing incidence of physical disabilities and chronic diseases such as diabetes, arthritis, and osteoporosis is driving the demand for prosthetics and orthotics. The development of advanced technologies such as 3D printing, computer-aided design, and virtual reality is driving the growth of the prosthetics and orthotics market. These technologies are enabling the production of custom-fitted devices that are more comfortable, durable, and functional.
