Abstracts

Pyruvic acid (CH_3COCOOH), also known as 2-oxopropanoic acid, α -ketopropionic acid or acetylformic acid, is the simplest of the alpha-keto acids, with a carboxylic acid and a ketone functional group. Pyruvic acid is the most important α -oxocarboxylic acid. It plays a central role in energy metabolism in living organisms. Industrially, it is used mainly as a starting material in the biosynthesis of pharmaceuticals, such as L-tryptophan, L-tyrosine and alanine, as well as L-DOPA. It is also employed in the production of crop protection agents, polymers, cosmetics and food additives. The pyruvic acid market is expected to grow by USD 7.63 million during 2020-2026, according to the latest research report by Gen Consulting Company. Pyruvic acid and its derivatives have a wide range of applications in the pharmaceutical sector, and the market is expected to sustain growth with the development of its manufacturing processes and decreasing production costs.

Based on process, the market for pyruvic acid is segmented into Chemically Synthesis, Biosynthesis.
