Abstracts

A common radiant cooktop is a coil element stove. Radiant cooktops are much like traditional coil electric cooktops with a ceramic glass cover. Electricity heats the metal coil beneath the glass surface, which then heats the vessel on the cooktop. Like induction cooktops, radiant cooktops are thin and can be easily installed on a flat surface, such as a countertop. The use of radiant cooktops can greatly reduce the risks associated with unhealthy cooking fumes, which is the main reason that is driving the market for radiant cooktops. According to Gen Consulting Company, global radiant cooktops market size was valued at \$4.82 billion in 2019 and is projected to reach \$6.62 billion by 2026, registering a CAGR of 4.65% from 2020 to 2026.
