Abstracts

Re-refining is a process used to refurbish used oil and return it to a high-quality base oil. Re-refiners use various processes to remove contaminants, water, spent additives and any of the original remaining additives from the used oil. The result is the reclamation of approximately 75 to 80 percent of the original base stock. The base oil is then sold to blenders who add additive packages to produce lubricants such as motor oil, transmission fluid, and grease. The main difference between re-refined and virgin oil products is that re-refined represents the responsible choice for the environment. The global re-refined base oil market is anticipated to increase by USD 3.1 billion till 2029 at an average annual growth of 6.2 percent as per the latest market estimates.

The report covers market size and growth, segmentation, regional breakdowns, competitive landscape, trends and strategies for global re-refined base oil market.
