Abstracts

Remote patient monitoring, also referred to as remote physiologic monitoring or RPM, is a method of healthcare delivery that uses the latest advances in information technology to gather patient data outside of traditional healthcare settings. RPM can help keep people healthy, allow older and disabled individuals to live at home longer and avoid having to move into skilled nursing facilities. RPM can also serve to reduce the number of hospitalizations, readmissions, and lengths of stay in hospital-all of which help improve quality of life and contain costs. Gen Consulting Company predicts global remote patient monitoring market will grow from USD 2,168 million in 2020 to USD 5,458 million by 2027, achieving a CAGR of 14.1 percent, according to the latest edition of the Global Remote Patient Monitoring Market Report.
