## Abstracts

Insect repellents are used to repel mosquitoes, ticks, flies, and other biting insects. Mosquitoes can transmit diseases such as Zika, Malaria, and West Nile virus. Ticks can transmit Lyme disease, Rocky Mountain Spotted Fever, and other diseases. For protection against mosquito bites, formulations containing DEET (N,N-diethyl-m-toluamide), icaridin (sold under the trade name Saltidin and formerly known as Bayrepel or KBR3023), ethyl butylacetylaminopropionate (IR3535) and citriodiol (p-menthane-3,8-diol) are available.

The global repellent chemicals (DEET, picaridin and IR3535) market size was valued at \$177.93 million in 2019 and is projected to reach \$227.45 million by 2026, registering a CAGR of 3.57% from 2020 to 2026. The major driving factors for the insect repellents market are rise in incidence of mosquito-borne diseases, rising health awareness, and government initiatives for mosquito control.
