## Abstracts

Rhenium is a precious and rare metal. Its melting point is 3,186°C, which is the third highest melting point of all the elements. This, together with the highest boiling point (5,596°C), high density (21.03 g/cc) and high hardness and resistance to corrosion and deformation, makes rhenium unique. Rhenium is a strategic commodity in applications requiring resistance to extreme high temperatures.

The report covers forecast and analysis for the rhenium market on a global and regional level. The study provides historic data of 2012-2016 along with a forecast from 2017 to 2022 based on both volumes and revenue. The study includes drivers and restraints for the rhenium market along with the impact they have on the demand over the forecast period.
