Abstracts

A rice transplanter is a specialized transplanter fitted to transplant rice seedlings onto paddy field. Mechanical transplanting of rice is the process of transplanting young rice seedlings, which have been grown in a mat nursery, using a self-propelled rice transplanter. In conventional manual transplanting practice, 8-12 labourers are required to transplant one acre. However, if a self-propelled rice transplanter is used, three people can transplant up to four acres in a day. According to Gen Consulting Company, global rice transplanter market is expected to reach USD 1,254.32 million by the end of 2026, expanding at a CAGR of 5.81% over the forecast period i.e. 2020-2026. Increasing rates of mechanization in developing countries is the chief contributor for the growth of the market.
