Abstracts

Sexual health supplements are formulated using chemical or synthetic ingredients to enhance sexual performance. These supplements often contain a combination of vitamins, amino acids, minerals, and herbal extracts. Unlike pharmaceutical drugs, they do not require a prescription and can be purchased over-the-counter at various retail stores.

In terms of market dominance, Europe leads the global sexual health supplement market. The region's growth is primarily driven by an increase in the prevalence of sexual health issues in both men and women, as well as a heightened awareness of sexual health among the population. As consumers become more aware of the importance of nutrition, they are inclined to purchase health supplements. Moreover, the market is influenced by the attractiveness of the products, which plays a role in customer acceptance and compliance. People often experiment with different dosage forms to achieve optimal results, including tablets, capsules (both soft and hard), softgels, liquids, and powders.

The European sexual health supplement market was valued at \$715 million in 2022 and is projected to reach \$1,202 million by 2029, exhibiting a compound annual growth rate (CAGR) of 7.7% during the forecast period. In the Asia-Pacific (APAC) region, the market is experiencing rapid growth and emergence. This can be attributed to the large patient population, increasing prevalence of conditions like erectile dysfunction and infertility, and the consequent rise in demand for sexual health supplements. Within APAC, China and India stand out as the largest consumers of these supplements, with a significant presence of established and emerging players, further driving the growth of the global sexual health supplement market.
